

No. 4848.

THE UNITED STATES OF AMERICA.

To all to whom these letters patent shall come:

Whereas CHARLES T. JACKSON and WILLIAM T. G. MORTON, Boston, Massachusetts, have alleged that they have invented a new and useful improvement in surgical operations, (the said Jackson having assigned his right, title, and interest in said improvement to the aforesaid Wm. T. G. Morton,) which they state has not been known or used before their application; have made oath that they are citizens of the United States, that they do verily believe that they are the original and first inventors or discoverers of the said improvement, and that the same hath not, to the best of their knowledge and belief, been previously known or used; have paid into the Treasury of the United States the sum of thirty dollars, and presented a petition to the Commissioner of Patents signifying a desire of obtaining an exclusive property in the said improvement, and praying that a patent may be granted for that purpose:

These are therefore to grant, according to law, to the said WILLIAM T. G. MORTON, his heirs, administrators, or assigns, for the term of fourteen years from the twelfth day of November, one thousand eight hundred and forty-six, the full and exclusive right and liberty of making, constructing, using, and vending to others to be used, the said improvement, a description whereof is given in the words of the said JACKSON and MORTON in the schedule hereunto annexed, and is made a part of these presents.

In testimony whereof, I have caused these letters to be made patent, and the seal of the Patent office has been hereunto affixed.

Given under my hand at the city of Washington, this twelfth
[L. s.] day of November, in the year of our Lord one thousand eight hundred and forty-six, and of the independence of the United States of America the seventy-first.

JAMES BUCHANAN,

Secretary of State.

Countersigned and sealed with the seal of the Patent office.

EDMUND BURKE,

Commissioner of Patents.

The schedule referred to in these letters patent, and making part of the same.

To all persons to whom these presents shall come:

Be it known, that we, Charles T. Jackson and William T. G. Morton, of Boston, in the county of Suffolk, and State of Massachusetts, have invented or discovered a new and useful improvement in surgical operations on animals, whereby we are enabled to accomplish many,

if not all, operations, such as are usually attended with more or less pain and suffering, without any, or with very little, pain to or muscular action of persons who undergo the same; and we do hereby declare that the following is a full and exact description of our said invention or discovery:

It is well known to chemists that when alcohol is submitted to distillation with certain acids, peculiar compounds termed *ethers* are formed, each of which is usually distinguished by the name of the acid employed in its preparation. It has also been known that the vapors of some, if not all, of these chemical distillations, particularly those of sulphuric ether, when breathed or introduced into the lungs of an animal, have produced a peculiar effect on its nervous system, one which has been supposed to be analogous to what is usually termed intoxication.

It has never (to our knowledge) been known, until our discovery, that the inhalation of such vapors (particularly those of sulphuric ether) would produce insensibility to pain, or such a state of quiet of nervous action as to render a person or animal incapable to a great extent, if not entirely, of experiencing pain while under the action of the knife or other instrument of operation of a surgeon calculated to produce pain. This is our discovery, and the combining it with or applying it to any operation of surgery for the purpose of alleviating animal suffering, as well as of enabling a surgeon to conduct his operation with little or no struggling or muscular action of the patient, and with more certainty of success, constitutes our invention. The nervous quiet and insensibility to pain produced on a person is generally of short duration; the degree or extent of it, or time which it lasts, depends on the amount of etherial vapor received into the system, and the constitutional character of the person to whom it is administered. Practice will soon acquaint an experienced surgeon with the amount of etheric vapor to be administered to persons for the accomplishment of the surgical operation or operations required in their respective cases. For the extraction of a tooth the individual may be thrown into the insensible state, generally speaking, only a few minutes. For the removal of a tumor, or the performance of the amputation of a limb, it is necessary to regulate the amount of vapor inhaled to the time required to complete the operation. Various modes may be adopted for conveying the etheric vapor into the lungs. A very simple one is to saturate a piece of cloth or sponge with sulphuric ether, and place it to the nostrils or mouth so that the person may inhale the vapors. A more effective one is to take a glass or other proper vessel like a common bottle or flask. Place in it a sponge saturated with sulphuric ether. Let there be a hole made through the side of the vessel for the admission of atmospheric air, (which *hole* may or may not be provided with a valve opening downwards, or so as to allow air to pass into the vessel,) a valve on the outside of the neck opening upwards, and another valve in the neck, and between that last mentioned and the body of the vessel or flask, which latter valve in the neck should open towards the mouth of the neck or

bottle. The extremity of the neck is to be placed in the mouth of the patient, and his nostrils stopped or closed in such manner as to cause him to inhale air through the bottle, and to exhale it through the neck, and out of the valve on the outside of the neck. The air thus breathed by passing in contact with the sponge will be charged with the etheric vapors, which will be conveyed by it into the lungs of the patient. This will soon produce the state of insensibility or nervous quiet required.

In order to render the ether agreeable to various persons, we often combine it with one or more essential oils having pleasant perfumes. This may be effected by mixing the ether and essential oil, and washing the mixture in water. The impurities will subside, and the ether, impregnated with the perfume, will rise to the top of the water. We sometimes combine a narcotic preparation, such as opium or morphine, with the ether.

This may be done by any ways known to chemists by which a combination of etheric and narcotic vapors may be produced. After a person has been put into the state of insensibility, as above described, a surgical operation may be performed upon him without, so far as repeated experiments have proved, giving to him any apparent or real pain, or so little, in comparison to that produced by the usual process of conducting surgical operations, as to be scarcely noticeable. There is very nearly, if not entire absence of all pain. Immediately, or soon after the operation is completed, a restoration of the patient to his usual feelings takes place, without, generally speaking, his having been sensible of the performance of the operation.

From the experiments we have made we are led to prefer the vapors of sulphuric ether to those of muriatic or other kind of ether, but any such may be employed which will properly produce the state of insensibility without any injurious consequences to the patient.

We are fully aware that narcotics have been administered to patients undergoing surgical operations, and, as we believe, always by introducing them into the *stomach*. This we consider in no respect to embody our invention, as we operate through the *lungs and air passages*, and the effects produced upon the patient are entirely, or so far different as to render the one of very little, while the other is of immense utility. The consequences of the change are very considerable, as an immense amount of human or animal suffering can be prevented by the application of our discovery.

What we claim as our invention is the herein before described means by which we are enabled to effect the above highly important improvement in surgical operations, viz., by combining therewith the application of ether, or the vapor thereof, substantially as above specified.

In testimony whereof we have hereto set our signatures this twenty-seventh day of October, A. D. 1846.

CHARLES T. JACKSON,
WM. T. G. MORTON.

Witnesses—R. H. EDDY,
W. H. LEIGHTON.

THE UNITED STATES PATENT OFFICE.

To all persons to whom these presents shall come, greeting :

This is to certify, that the annexed is a true copy from the records of this office.

In testimony whereof, I, Charles Mason, commissioner of patents, have caused the seal of the Patent office to be hereunto affixed, this eighteenth day of July, in the year of Lord one thousand eight hundred and fifty-four, and of the independence of the United States the seventy-ninth.

C. MASON.

To all persons to whom these presents shall come :

Whereas I, Charles T. Jackson, of Boston, in the State of Massachusetts, chemist, have, in conjunction with William T. G. Morton, of said city, dentist, invented or discovered a new and useful improvement in surgical operations on animals, whereby we are enabled to accomplish many, if not all operations such as are usually attended with more or less pain and suffering, without any or with very little pain or muscular action to persons who undergo the same. And whereas, the said Morton is desirous of procuring a patent on the same, and as I believe cannot legally do so without my signature to the specification and application; and whereas I am desirous of benefiting him and not to be interested in any patent: I have, therefore, in consideration of one dollar, to me in hand paid, the receipt whereof I do hereby acknowledge, assigned, set over, and conveyed, and by these presents do assign, set over, and convey, to the said Morton, and his legal representatives, all the right, title, and interest whatever which I possess in the said invention or discovery, a specification of which I have this day signed and executed in conjunction with him, for the purpose of enabling him to procure a patent thereon.

And I do hereby request the Commissioner of Patents to issue the said patent to the said Morton *in his name*, and as my assignee or legal representative to the extent of all my right, title, and interest whatever in the said invention or discovery.

In testimony whereof I have hereto set my signature and affixed my seal, this twenty-seventh day of October, one thousand eight hundred and forty-six.

CHARLES T. JACKSON. [SEAL.]

Witness—R. H. EDDY.

Received and recorded, November 10, 1846.
